Aquatick✓ Spa Pool Treatment System - Home Spa

The **Aquatick✓ Spa Pool Treatment System** is a completely balanced system that keeps the water clear, hygienic and inviting regardless of the number of bath-ers. The unique combination of blended powders along with the tablets and the liquid system cleaner work synergistically to keep the necessary chemical levels in balance and kill bacteria that is introduced to the water.

The **Aquatick✓ Spa Pool Treatment System** uses four products: two powders, some tablets and a liquid system cleaner.

- **Aquatick✓ Spa Powder ONE** sets up the water balance by adding alkalinity and hardness and charges the water with a quiescent disinfectant.
- **Aquatick✓ Spa Powder TWO** activates the quiescent disinfectant, oxidises organic matter in the water and maintains the correct pH and water balance.
- **Aquatick✓ Spa Bromine Tablets** continuously release small quantities of bromine and chlorine into the water.
- **Activ-Ox SpaClean SPA** is used periodically to clean bio-film from the pipes and the filter housing. It is a safe means of producing chlorine dioxide which is one of the most powerful disinfectants known.

After extensive laboratory tests the system was trialled in a spa that had sixty users over five weeks. The water never lost clarity; there were never any noxious odours; there was never any skin irritation. Bi-weekly chemical analysis confirmed the water balance was always maintained. Microbiological analysis carried out by an independent laboratory showed the bacterial levels were kept well below the limits set by NZS5826:2000 Pool Water Quality.

The real value of the **Aquatick✓ Spa Pool Treatment System** is it requires very little effort to provide safe, clean, appealing and hygienic water.

No guessing! No fuss! It's simple, safe and effective!

Aquatick✓ Spa Pool Treatment System - Home Spa

How to use the **Aquatick✓ Spa Pool Treatment System**

Take the treatment of your spa pool seriously - it is a potential hazardous environment. Use this system as directed and you will not have a problem. You will have a safe and hygienic spa pool for you, your family and your friends to enjoy.

Every time the spa pool is filled with new, clean water, turn the pump on and:

If the spa holds about 800 to 1,400 litres add 3 level scoops of **Aquatick✓ Spa Powder ONE**.
If the spa pool holds 1,500 to 2,000 litres add 4 level scoops of **Aquatick✓ Spa Powder ONE**.

About half an hour later:

- add 2 level scoops of **Aquatick✓ Spa Powder TWO**.
- put 1 **Aquatick✓ Spa Bromine Tablet** in the Rota Flow container.
- Put the Rota Flow container into the water.

Each time before using the spa:

- a couple of minutes before getting in, turn the pump on and sprinkle 1 level scoop of **Aquatick✓ Spa Powder TWO** into the water.

When you get out:

- leave the pump going and sprinkle 1 level scoop of **Aquatick✓ Spa Powder TWO** into the water.
- about 1/2 an hour later turn the pump off.

Note: if the pool has had particularly heavy use and the water looks a little murky, double the dose of **Aquatick✓ Spa Powder TWO** OR shock dose with chlorine to 10ppm.

Once a week:

- add 1 **Aquatick✓ Bromine Tablet**.

Always have the pump going when you add the chemicals and add the chemicals where the water is turbulent.

Adjust the Rota Flow so the **Aquatick✓ Spa Bromine Tablet** completely dissolves in no more than 5 days.

After about 30 people have used the spa, empty it and refill it with clean water:

Before you empty and refill the spa, flush the system through with **Activ-Ox SpaClean SPA**. To flush the pipes and filter housing add the **Activ-Ox SpaClean SPA** to the water and run the circulation pump for about half an hour. Turn the pump off and leave the pool over night. The next morning run the pump for about ten minutes and then empty the pool.

WARNING: A spa pool is a wonderful environment for bacteria to grow: the temperature is just right and there is lots of nutrition. Some harmful bacteria can become quite resistant to the regular disinfectant treatment and they can "hide" in the bio-film that can form on the pipes and in the filter media and housing. To ensure the whole circulation and filter system is completely free of any of these harmful bacteria use **Activ-Ox SpaClean SPA** every third time before draining the spa pool to refill it with clean water. See the **Activ-Ox SpaClean SPA** pack for instructions on how to use it.
